健康安全首選

Health and Safety First Choice

銅製龍頭

COPPER FAUCET

銅

內壁材質為無電鍍層銅材料，銅含鉛且易生鏽，間接污染水源。

Copper The inner wall is made of electroless copper. Copper contains lead and is easy to rust, which indirectly pollutes water sources.

污

內壁層易凹凸不平，容易藏污。

Dirt The inner wall layer is prone to unevenness and easy to hide dirt.

電鍍

因電鍍鉻而維持短期光鮮，隨著時間，鍍鉻層容易脫落生鏽。

Zinc Plating The short-term gloss is maintained due to chrome plating, and the chrome layer is liable to fall off and rust over time.
